FOREWORD

This is a third volume of cosmic-ray publications, which, we trust, will remain in scientific libraries throughout the world as a monument to the sustained cooperative efforts of a group of men with warm and lasting interest in the phenomena of geophysics. The elusive origins of the very high-energy radiations that come to our atmosphere from unknown reaches of space have not, as yet, been satisfactorily delineated by theory or by experiment. Because the orbits of charged particles are so comprehensively changed by their encounter with the magnetic field of the earth, directions of arrival of these radiations do not appear to be reliable indicators of the origins of the particles. Time variations of the radiations, however, suitably interpreted, may give some firm indications of the mechanisms in space that yield radiations of such enormous energies as are observed in cosmic-ray work. This was the expectation more than two decades ago, when the world network of cosmic-ray observing stations was set up by Carnegie Institution of Washington at the request of the late Professor R. A. Millikan, Professor A. H. Compton, and the late Dr. J. A. Fleming, who died in midsummer 1956. This volume presents in detail the data obtained at the Instituto Geofísico de Huancayo, Huancayo, Peru, and at the station operated by the U. S. Coast and Geodetic Survey at Cheltenham, Maryland. The Cheltenham instrument was moved to the new U. S. Coast and Geodetic Survey station near Fredericksburg, Virginia, in October 1956. The data obtained at Christchurch, New Zealand, and at Godhavn, Greenland, are summarized in this volume.

The principal guidance for these studies has been in the hands of Scott E. Forbush of this Department, and a great deal of the technical computation and analysis has been carried out by Mrs. Liselotte Beach. The faithful work of the several observers in the operation and maintenance of the cosmic-ray meters at the institutions mentioned was of course a foundation on which this work rests. Grateful acknowledgment is made to the Instituto Geofísico de Huancayo and its Director, Dr. A. A. Giesecke, Jr., for providing records from that station. These were obtained with equipment transferred as part of the Huancayo Magnetic Observatory by gift of the Department of Terrestrial Magnetism to the Peruvian Government on July 1, 1947. Special acknowledgment is due the staff of the Christchurch Magnetic Observatory for having scaled all the hourly cosmic-ray records at that station since April 1936.

Carnegie Institution is happy to have the privilege of publishing this joint volume for the various institutions concerned.

This work was carried out in part under a National Science Foundation Grant for the International Geophysical Year Cosmic Ray Program, which support is gratefully acknowledged.

M. A. Tuve, Director
Department of Terrestrial Magnetism
Carnegie Institution of Washington

PREFACE

The installation, operation, and maintenance of the four Compton-Bennett ionization chambers which provided the data for this volume would have been impossible without the enthusiastic cooperation of several organizations and individuals. To the Instituto Geofísico de Huancayo and its Director, Albert A. Giesecke, we are grateful for making available the records from Huancayo. These were obtained with equipment belonging to the Huancayo Magnetic Observatory, which was transferred July 1, 1947, by gift of the Department of Terrestrial Magnetism to the Government of Peru. We express our appreciation to the Director of the U. S. Coast and Geodetic Survey for providing space for the meter at the Cheltenham Magnetic Observatory, and to the members of the staff of that observatory for efficient operation and maintenance of the equipment. Grateful acknowledgment is also made to the Director of the U. S Coast and Geodetic Survey for providing a building for the cosmic-ray meter at its new Fredericksburg (Virginia) Magnetic Observatory and to the observer in charge there, Robert E. Gebhardt, for transferring the meter from Cheltenham in October 1956. We acknowledge the cooperation of the Director, Magnetic Survey Division, Department of Scientific and Industrial Research of New Zealand, for making available the facilities of the Geophysical Observatory at Christchurch; and to the Director and staff of that observatory we are particularly grateful, not only for efficient operation and maintenance of the meter, but also for scaling all the hourly cosmic-ray records for that station since April 1936. We also wish to thank the Director, Det Danske Meteorologiske Institut, and the Director and staff of its Geofysisk Observatorium at Godhavn, Greenland, for the effective operation and maintenance of the meter there. Grateful acknowledgment is made to the Government of Denmark for transportation of equipment and supplies to Godhavn.

On July 1, 1959, the cosmic-ray meters at Christchurch, New Zealand, and at Godhavn, Greenland, were turned over respectively to the Department of Scientific and Industrial Research and to the Danske Meteorologiske Institut. Both these organizations have continued operation of the meters to date.

COSMIC-RAY RESULTS FROM HUANCAYO, PERU; CHELTENHAM, MARYLAND–FREDERICKSBURG, VIRGINIA; CHRISTCHURCH, NEW ZEALAND; GODHAVN, GREENLAND; AND UNIVERSIDAD NACIONAL DE MÉXICO, INSTITUTO DE GEOFÍSICA, MÉXICO

INTRODUCTION

Volume XIV and volume XX of Researches of the Department of Terrestrial Magnetism (Carnegie Institution of Washington Publication 175) contained cosmic-ray data from Huancayo, Cheltenham, Christchurch, and Godhavn. Volume XIV contained bihourly mean values for Huancayo and summaries of data for all four stations through 1946. Volume XX extended the summaries from Huancayo, Cheltenham, and Christchurch through 1955 and from Godhavn through 1950, and in addition included not only bihourly mean values from Huancayo for the period January 1946 through December 1955 but also bihourly mean values from Cheltenham for the period March 1937 through December 1955.

Volume XIV described a typical installation, the instrument used, the absolute values of ionization, and procedures for reduction of the data. It also gave the geographical coordinates, the altitude, and the geomagnetic latitude of the stations. The Fredericksburg Magnetic Observatory is located at geographic latitude 38° 12′ N and longitude 77° 22′ W at an elevation of 69 meters above sea level. Universidad Nacional de México is at geographic latitude 19° 20′ N and longitude 99° 11′ W at an elevation of 2267 meters above sea level.

The present volume includes data subsequently obtained through 1959 from Huancayo and Cheltenham–Fredericksburg. The station at Cheltenham was moved to Fredericksburg on October 5, 1956; care was taken to ensure that there is no discontinuity in the published values at the time of this transfer. Bihourly means and summaries for Huancayo and Cheltenham–Fredericksburg are included. Summaries for Christchurch are for the period January 1956 through June 1959. Bihourly means and summaries for Godhavn are for the period January 1954 through July 1959. Also included are bihourly means and summaries from Universidad Nacional de México, Instituto de Geofísica, for the IGY period July 1957 through December 1958.

REDUCTION OF DATA

For Huancayo the data in the present volume were reduced as described in detail in Volume XIV, except that after 1945 no IBM (International Business Machines) equipment was available to facilitate the reductions. The barometric coefficients used throughout are those given in Volume XIV.

For Godhavn and Cheltenham the corrections for barometric pressure were scaled directly from the trace of the recording aneroid barometer on the cosmic-ray record.

For Christchurch hourly mean pressures scaled at Christchurch are centered at 0.5, 1.5, 2.5., etc., hours. To correct the bihourly mean ionization at Christchurch for the interval 0-2 hours, for example, the average of the hourly mean pressures at 0.5 and 1.5 hours was used, and similarly for the other bihourly means. For Huancayo instantaneous values of pressure at each 75° WMT hour were scaled at Huancayo from an ordinary barograph. From 1936 through 1945, the bihourly values of ionization were corrected using instantaneous values of pressure read at the mid-point of these bihourly intervals. It was recently found that from January 1946 through December 1958 the procedure used for Huancayo was changed, for reasons which will never be understood! This changed erroneous procedure used the means of instantaneous values of pressure at hours 1 and 2, for example, to correct the bihourly value of ionization for the interval 0-2 hours. As a consequence, the pressure waves used to correct the ionization have their phases one-half hour too late. Fortunately, the resulting error in published bihourly means corrected for pressure for Huancayo never amounts to more than ±0.2 per cent, which is of no serious consequence except for effects on diurnal variation from a large number of days, since the standard deviation of bihourly values at Huancayo is about 0.4 per cent.

Beginning with January 1959, the correct procedure was re-established for correcting bihourly mean values of ionization for pressure at Huancayo.

Table A gives for the 24-hour and 12-hour waves, on 75° WMT, the corrections for each month of the year,

Table A. Derivation of corrections to be added in the interval January 1946 through December 1958 to harmonic coefficients on 75° WMT for Huancayo derived from published bihourly pressure-corrected values

	Harmonic coefficients * for pressure in units of 0.01 mm Hg								Additive correction ‡ in units of 0.001%

* Derived from averages for 1946, 1948, 1950, 1952, 1954.

† These coefficients are those that would be obtained from harmonic analysis of bihourly pressure values centered ½ hour late when these bihourly pressures are assumed, in the harmonic analysis, to be centered at the correct time.

‡ From $(a_{11} - a_{12}) \times 0.030$, $(b_{11} - b_{12}) \times 0.030$, etc.

to be added to the 24-hour and 12-hour waves obtained from harmonic analysis of the ionization erroneously corrected for pressure. Table A shows also the derivation of these corrections. If harmonic analysis of data in the interval January 1946 through December 1958 are made using bihourly means on GMT and with origin at 0.0 hour GMT, then the coordinates of the corrections in Table A must be referred to the appropriate reference axes.

In a paper entitled "Diurnal Variation in Cosmic-Ray Intensity, 1937-1959, at Cheltenham (Fredericksburg), Huancayo, and Christchurch" by Scott E. Forbush and D. Venkatesan, tables are given for the annual mean 24-hour and 12-hour waves at these three stations. In these tables, the values of these harmonic coefficients for Huancayo for the period January 1946 through December 1958 are those that would be obtained from properly applied pressure corrections during that interval.

This paper was published in the Journal of Geophysical Research, volume 65, pages 2213-2226, August 1960. It also contains a critical examination of the errors that can arise from inevitable friction (and imperfect temperature compensation) in recording barographs and microbarographs.

Since installation of the meters at Huancayo and Cheltenham, the argon pressure at 15° C has remained constant through 1955 at 740 and 700 lb in.$^{-2}$, respectively. For Christchurch the argon pressure at 15° C has remained constant through June 1959 at 740 lb in.$^{-2}$ since November 10, 1938; and at Godhavn it has stayed constant from September 1944 through July 1959 at 580 lb in.$^{-2}$ For Godhavn all departures from balance have been normalized to argon pressure 700 lb in.$^{-2}$

It is important to note that all data in the present volume, as in volume XIV and in volume XX, are corrected only for barometric pressure. No other meteorological corrections have been applied. Consequently, seasonal waves are present in the data for all stations except perhaps Huancayo. In addition, the data at all stations except Cheltenham indicate slow changes in the background intensity. These instrumental drifts and seasonal variations are described in "World-Wide Cosmic-Ray Variations, 1937-1952," Journal of Geophysical Research, volume 59, pages 525-542, December 1954.

DESCRIPTION OF TABLES

Instituto Geofísico de Huancayo

Tables 1-48.—Monthly tables for the period January 1956 through December 1959 contain bihourly mean values of departure from balance corrected to 510 mm Hg. Bihourly mean values are centered at the indicated Greenwich mean hours. Tabular values are in units of 0.1 per cent of total cosmic-ray ionization with 6.0 per cent added.

Tables 49-52.—Annual tables for the period 1956 through 1959 contain daily means of hourly departures from balance, corrected to 510 mm Hg. Tabular values, by months, are in units of 0.1 per cent of total cosmic-ray ionization with 6.0 per cent added to obtain the tabulated values. Superscripts a to k indicate the number of missing bihourly values 1 to 11, respectively.

Tables 53-56.—Annual tables for the period 1956 through 1959 contain bihourly values of diurnal variation in departures from balance, corrected to 510 mm Hg, centered at the indicated Greenwich mean hours. Tabulations are by months, seasons, and years, from days with complete records. Means of three groups of four months each are designated by Roman numerals, as follows: I, January, February, November, December; II, March, April, September, October; III, May, June, July, August. Tabular values are in units of 0.01 per cent of total cosmic-ray ionization, with 6.0 per cent added.

Cheltenham Magnetic Observatory[1]
Fredericksburg Magnetic Observatory

Tables 57-104.—Monthly tables for the period January 1956 through December 1959 (tables 57-65 at Cheltenham, tables 66-104 at Fredericksburg) contain bihourly mean values of departures from balance, corrected to 760 mm Hg. Bihourly mean values are centered at the indicated Greenwich mean hours. Tabular values are in units of 0.1 per cent of total cosmic-ray ionization, with 10.0 per cent added.

Tables 105-108.—Annual tables for the period 1956 through 1959 contain daily means of hourly departures from balance, corrected to 760 mm Hg. Tabular values, by months, are in units of 0.1 per cent of total cosmic-ray ionization with 10.0 per cent added to obtain the tabulated values. Superscripts a to k indicate the number of missing bihourly values 1 to 11, respectively.

Tables 109-112.—Annual tables for the period 1956 through 1959 contain bihourly values of diurnal variation in departures from balance, corrected to 760 mm Hg, centered at the indicated Greenwich mean hours, by months, seasons, and years, from days with complete records. Means for three groups of four months each are designated by Roman numerals, as follows: I, January, February, November, December; II, March, April, September, October; III, May, June, July, August. Tabular values are in units of 0.01 per cent of total cosmic-ray ionization, with 10.0 per cent added to obtain the tabulated values.

Christchurch Magnetic Observatory

Tables 113-116.—Annual tables for the period 1956 through June 1959 contain daily means of hourly departures from balance, corrected to 29.00 in. Hg. Tabular values, by months, are in units of 0.1 per cent of total cosmic-ray ionization. Superscripts a to k indicate the number of missing bihourly values 1 to 11, respectively.

Tables 117-120.—Annual tables for the period 1956 through June 1959 contain bihourly values of diurnal variation in departures from balance, corrected to 29.00 in. Hg, centered at the indicated Greenwich mean hours, by months, seasons, and years, from days with complete records. Means for three groups of four months each are designated by Roman numerals, as follows: I, January, February, November, December; II, March, April, September, October; III, May, June, July, August. Tabular values are in units of 0.01 per cent of total cosmic-ray ionization.

Godhavn Magnetic Observatory

Tables 121-187.—Monthly tables for the period January 1954 through July 1959 contain bihourly mean values of departures from balance corrected to 760 mm Hg. Bihourly mean values are centered at the indicated Greenwich mean hours. Tabular values are in units of 0.1 per cent of total cosmic-ray ionization, with 13.0 per cent added.

Tables 188-193.—Annual tables for the period 1954 through July 1959 contain daily means of hourly departures from balance, corrected to 760 mm Hg. Tabular values, by months, are in units of 0.1 per cent of total cosmic-ray ionization, with 13.0 per cent added to obtain the tabulated values. Superscripts a to k indicate the number of missing bihourly values 1 to 11, respectively.

Tables 194-199.—Annual tables for the period 1954 through July 1959 contain bihourly values of diurnal variation in departures from balance, corrected to 760

[1] The station was moved from Cheltenham to Fredericksburg on October 5, 1956.

mm Hg, centered at the indicated Greenwich mean hours, by months, seasons, and years, from days with complete records. Means of three groups of four months each are designated by Roman numerals, as follows: I, January, February, November, December; II, March, April, September, October; III, May, June, July, August. Tabular values are in units of 0.01 per cent of total cosmic-ray ionization, with 13.0 per cent added to obtain the tabulated values.

Universidad Nacional de México

Instituto de Geofísica

Tables 200-217.—Monthly tables for the period July 1957 through December 1958 contain bihourly mean values of departures from balance, corrected to 585 mm Hg. Bihourly mean values are centered at the indicated Greenwich mean hours. Tabular values are in units of 0.1 per cent of total cosmic-ray ionization, with 6.0 per cent added.

Tables 218-219.—Annual tables for the period July 1957 through 1958 contain daily means of hourly departures from balance, corrected to 585 mm Hg. Tabular values, by months, are in units of 0.1 per cent of total cosmic-ray ionization, with 6.0 per cent added to obtain the tabulated values. Superscripts a to k indicate the number of missing bihourly values 1 to 11, respectively.

Tables 220-221.—Annual tables for the period July 1957 through 1958 contain bihourly values of diurnal variation in departures from balance, corrected to 585 mm Hg, centered at the indicated Greenwich mean hours, by months, seasons, and years, from days with complete records. Means for three groups of four months each are designated by Roman numerals, as follows: I, January, February, November, December; II, March, April, September, October; III, May, June, July, August. Tabular values are in units of 0.01 per cent of total cosmic-ray ionization, with 6.0 per cent added to obtain the tabulated values.
